PHASE 0 · 7 ITEMS

Research & Strategy

☐ 0.1 Define the business objective

What the business wants the website to accomplish e.g., generate qualified leads, sell products, book appointments, build awareness

AUDIT

Is the website connected to a measurable business goal?

BUILD

Write down the primary business outcome before designing the website.

☐ 0.2 Define the primary conversion

Identify the most important action you want the visitor to take e.g., requesting a quote, booking a consultation, purchasing a product, or starting a trial

AUDIT

Are there multiple competing actions without a clear priority?

BUILD

Choose one primary conversion and design the page around supporting that action

☐ 0.3 Define the primary audience

Who is the website intended to serve. Understand their circumstance, needs, level of knowledge, and reason for visiting

AUDIT

Does the messaging seem to target everyone instead of a specific audience

BUILD

Create an audience profile (persona) based on actual customer information, not just assumptions

☐ 0.4 **Identify problems and desired outcomes**

What is customer trying to solve and achieve. real-world outcome (moving towards)

AUDIT

Does the website address the visitor's problem?

BUILD

Document the customer's current situation, desired outcome, and why the outcome matters

☐ 0.5 **Identify objections and perceived risks**

Price, trust, complexity, timing, effort, result uncertainty. Collect evidence to support business claims: testimonials, case studies, certifications, project examples, demonstrations & results

AUDIT

Are important customer concerns left unanswered? Does the site make claims without evidence to support

BUILD

List likely objections and address the relevant ones through copy, proof, process explanations, or appropriate guarantees

☐ 0.6 **Understand alternatives and competitors**

Who might visitors compare the business against: competitors, alternative solutions or doing nothing

AUDIT

Does the website communicate why someone might choose this one over another

BUILD

Research competing offers, positioning, pricing, and customer expectations

☐ 0.7 **Define the conversion hypothesis**

Create a testable explanation for why the website may not be converting effectively.
Monitor what you observed from what you believe & things to change

AUDIT Are recommendations based on evidence or personal design preference?

BUILD Document the observations, hypothesis, proposed change, and how to measure results

01

PHASE 1 · 8 ITEMS

Offer & Positioning

☐ 1.1 **Clear value proposition**

Explain what the business offers, who it serves and the value it provides.

AUDIT Can a visitor understand the offer quickly.

BUILD Write a clear value proposition at a 6th grade reading level

☐ 1.2 **Outcome relevance**

Connect the product or service to what the customer cares about. Feature explanations should emphasize how they relate to customer concerns when appropriate. Don't make the customer think, but they should be able to imagine their dream outcome life

AUDIT Does the website list features w/o explaining why they matter?

BUILD Translate relevant features into customer benefits, outcomes, meaningful improvements.

☐ 1.3 **Meaningful differentiation**

Explain what makes the business different: specialization, methodology, experience, service, or a specific offer

AUDIT

Could a competitor use the same headline without changing its meaning?

BUILD

Identify genuine differences that matter to the customer

☐ 1.4 **Specific claims**

Use specificity to help customers understand the offer. Defensible claims

AUDIT

Are phrases unsupported

BUILD

Replace empty superlatives with concrete descriptions, evidence, or verifiable details (puffery is acceptable)

☐ 1.5 **Authority and expertise**

Does it exist? Can be shown through work, credentials, methods, or demonstrated results

AUDIT

Does the website give visitors enough information to assess the business's expertise?

BUILD

Present genuine credentials and relevant examples without overstating qualifications

☐ 1.6 **Risk reduction**

Identify and mitigate reasonable concerns about moving forward. Create clear expectations, transparent policies, trials, or guarantees where appropriate

AUDIT

What risks might prevent a visitor from taking action?

BUILD

Address those concerns with honest and operationally sustainable measures.

☐ 1.7 **Genuine scarcity**

Use scarcity or urgency only when it reflects a real limitation, like limited capacity, available spots, or a genuine deadline

AUDIT

Are countdowns or urgency claims genuine and relevant?

BUILD

Communicate real constraints without manufacturing pressure

☐ 1.8 **Shared identity**

Use authentic common ground when it helps a visitor connect with the business. Include local knowledge, industry specialization, or shared customer context

AUDIT

Does the business communicate relevant familiarity with its audience?

BUILD

Include genuine connections where they support trust or relevance.

02

PHASE 2 · 5 ITEMS

Information Architecture

☐ 2.1 **Define page purpose**

Every page should accomplish something e.g., educate, generate leads, showcase work, facilitate purchase

AUDIT

Does each page have a clear purpose

BUILD

Define the primary goal and intended audience for each page before designing it

☐ 2.2 **Build information hierarchy**

Organize and group information based on what deserves attention first, second and later. Highest viewership will exist at the top of pages

AUDIT Is critical information easy to find, logically grouped and prioritized

BUILD Rank content according to the visitor's needs and group related information into clear sections

☐ 2.3 **Match content to the decision process**

Present information in the sequence visitors need to evaluate the offer and take action

AUDIT Does the website answer the visitor questions in a helpful order?

BUILD Structure the journey from relevance → explanation → evidence → objections → next step.

☐ 2.4 **Navigation supports real tasks**

Should help visitors find important destinations easily

AUDIT Can visitors locate key pages and information?

BUILD Design navigation around actual visitor tasks, using clear labels and sensible grouping

☐ 2.5 **Create a sitemap before visual design**

A sitemap outlines the website's pages and relationships. Helps establish structure before spending time on high-fidelity design

AUDIT Was the website designed without a clear understanding of its page structure?

BUILD Create a sitemap and page plan before moving into detailed UI design when the project requires it

03

PHASE 3 · 8 ITEMS

Copy & Messaging

☐ 3.1 Write for the intended audience

Use language that the target audience uses

AUDIT

Is copy filled with unnecessary jargon or vague language

BUILD

Write using the audience's terminology and simplify anything that doesn't add value. If it doesn't move the story forward cut it

☐ 3.2 Make headings do real work

Should communicate content and help visitors more easily navigate the page. Shouldn't just sound interesting

AUDIT

Can visitors understand the major points by scanning the headings?

BUILD

Write headings that explain the section's actual message or benefit

☐ 3.3 Connect features to outcomes

Explain how features help the customer. Connect the dots for them

AUDIT

Does the copy describe the product function without explaining its value?

BUILD

Pair important features with relevant benefits, use cases, or outcomes

☐ 3.4 **Address major objections near the decision**

Add relevant reassurance where visitors will need it. They don't need to exist solely in FAQ section

AUDIT Are important questions answered only after the visitor is expected to act?

BUILD Address objections near the sections where those concerns naturally arise. What is the customer thinking at this important moment, and what do we need to say to arrest that feeling

☐ 3.5 **Use proof instead of unsupported superlatives**

Use evidence not just exaggerated descriptions

AUDIT Are important claims supported by relevant evidence?

BUILD Use testimonials, examples, demonstrations, or verifiable information that supports the claim

☐ 3.6 **Make the next step understandable**

Tell the visitors what they can expect when they click a CTA. Action should communicate its purpose and what happens after when necessary

AUDIT Is it unclear what clicking a button will do?

BUILD Use descriptive CTA text and supporting microcopy when appropriate

☐ 3.7 **Use concise, scannable copy**

Structure information, so customers can easily scan and find key points

AUDIT Are important ideas hidden inside long, dense paragraphs

BUILD Use headings, short paragraphs, lists, and emphasis where they improve readability

☐ 3.8 Match reading complexity to the audience

Language level used should fit target audience

AUDIT

Is the copy unnecessarily difficult for the target audience?

BUILD

Use the simplest language that preserves accuracy and meaning (6th grade reading level)

04 PHASE 4 · 7 ITEMS

Attention & Layout

☐ 4.1 Establish visual hierarchy

Relative importance should be clear through size, position, contrast, spacing, and grouping

AUDIT

Do important and unimportant elements compete equally for attention?

BUILD

Establish a clear hierarchy for headlines, supporting content, proof, and CTAs

☐ 4.2 Make the primary action prominent

AUDIT

Is the primary CTA difficult to locate or indistinguishable from secondary actions?

BUILD

Give the primary CTA appropriate visual prominence through placement, contrast, and context

☐ 4.3 **Minimize competing actions**

Reduce competition between different actions on the page.

AUDIT

Are multiple unrelated CTAs presented with equal emphasis

BUILD

Choose a primary action and make secondary actions visually and strategically subordinate when appropriate

☐ 4.4 **Support scanning**

Scanning patterns differ by content, device and individual behaviour

AUDIT

Can visitors identify the major message, proof and next step without excessive effort

BUILD

Use headings, sections, whitespace, and visual hierarchy to support scanning

☐ 4.5 **Use visuals to communicate**

Use images, diagrams, screenshots, demonstrations, diagrams, or videos when they help explain or provide evidence

AUDIT

Are visuals just decorative when they could also communicate something useful

BUILD

Select visuals based on the information they convey, not just for aesthetic

☐ 4.6 **Humanize when personal trust matters**

Show people, real work, or business environment when personal connection or expertise is relevant to the decision

AUDIT

Would relevant human or real-world evidence help visitors assess the business?

BUILD

Use appropriate founder photos, team images, project examples, or demonstrations when they add value

☐ 4.7 **Design mobile intentionally**

Create a dedicated experience for mobile

AUDIT

Are navigation, text, forms, buttons, and content hierarchy usable on a phone?

BUILD

Design and test responsive layouts across relevant screen sizes

05

PHASE 5 · 8 ITEMS

Trust & Persuasion

☐ 5.1 **Support important claims**

Evidence

AUDIT

Are consequential claims difficult to verify?

BUILD

Add relevant case studies, references, demonstrations, or other credible evidence

☐ 5.2 Use relevant social proof

Show experiences from customers similar to intended audience, or whose experience address relevant concerns

AUDIT

Is the proof generic or unrelated to the visitor's decision?

BUILD

Choose genuine testimonials & case studies that show relevant value

☐ 5.3 Make testimonials informative

Choose testimonials that provide useful context instead of just praise

AUDIT

Do testimonials explain what the customer valued or what problem was addressed?

BUILD

Include context such as the customer's situation, experience, or specific outcome. Use names, photos, and numbers only when authentic and appropriate

☐ 5.4 Show the real business

Make it reasonably easy for visitors to understand who runs the business and how to contact it

AUDIT

Are important legitimacy signals missing?

BUILD

Provide appropriate contact details, business information, people, policies, and relevant work examples

☐ 5.5 **Use reciprocity ethically**

Provide genuine value before asking for larger commitments: Useful audit, checklist, educational resource, or demonstration

AUDIT

Does the lead magnet provide meaningful value beyond collecting emails?

BUILD

Create a resource that helps the visitor solve part of their problem while demonstrating your expertise

☐ 5.6 **Use commitment progressively**

Let visitors begin with a smaller, relevant action before making a larger commitment.

AUDIT

Is the first requested action unnecessarily demanding?

BUILD

Consider suitable entry points such as a useful resource, consultation, or small assessment. Do not assume a smaller action is always better

☐ 5.7 **Be transparent about persuasion**

Don't mislead visitors or hide important conditions

AUDIT

Are fake countdowns, fabricated testimonials, or deceptive defaults being used?

BUILD

Communicate urgency, incentives, and limitations honestly

☐ 5.8 **Reduce uncertainty at the point of action**

Address questions that may come up right before a visitor commits

AUDIT

Does the visitor know what will happen, how long it will take, or what is expected?

BUILD

Use relevant microcopy, process details, pricing info, or privacy explanations to clarify the next step

06

PHASE 6 · 7 ITEMS

UI & Experience

☐ 6.1 Define typography hierarchy

Create a type system for display text, headings, body text, labels, and supporting information

AUDIT

Are font sizes, weights, and styles inconsistent or hard to distinguish

BUILD

Define type roles and type scales. Prioritize readability and hierarchy

☐ 6.2 Use a semantic color system

Assign colors based on purpose, like primary actions, secondary actions, success, warnings, and errors

AUDIT

Are colors used consistently or without a clear meaning

BUILD

Create a color system with defined roles, appropriate contrast and consistent usage

☐ 6.3 Create consistent spacing

Spacing to establish relationships, grouping and visual rhythm 8pt system

AUDIT

Does spacing appear random or make sections difficult to understand?

BUILD

Define spacing tokens or a consistent spacing system, and adapt it when needed

☐ 6.4 **Make interactive elements recognizable**

Help users understand what they can click, edit, select, or interact with. Interactive states should communicate what is happening

AUDIT Are buttons, links, form fields, and disabled states visually ambiguous?

BUILD Create consistent interaction patterns, labels, hover/focus states, and feedback

☐ 6.5 **Use component consistency**

AUDIT Do similar buttons, cards, forms or messages have inconsistent designs or behaviors?

BUILD Create reusable components and design tokens to support consistency and efficient implementation

☐ 6.6 **Accessible contrast and text**

Make content readable and interfaces usable for people with different visual needs

AUDIT Do text and interactive elements meet relevant accessibility requirements

BUILD Follow applicable WCAG guidance for contrast, text, and semantic structure

☐ 6.7 **Keyboard and assistive technology**

Make sure essential interactions can be completed using appropriate input methods, keyboard navigation and assistive technologies

AUDIT Can users navigate and complete important tasks without relying exclusively on a mouse?

BUILD Use semantic HTML, labels, focus states, logical order, and accessible names

07

PHASE 7 · 7 ITEMS

Conversion Mechanics

☐ 7.1 Define one primary conversion path

The main action that a page is designed to support. Secondary actions can remain available when they have a legitimate purpose

AUDIT

Is the primary conversion path obvious, logical, and easy to complete?

BUILD

Map the conversion journey from CTA → action → confirmation

☐ 7.2 Repeat the CTA when context justifies it

Allow customers to act after they have received enough information to make a decision

AUDIT

Do visitors have to scroll or return to the top to take action?

BUILD

Place relevant CTA opportunities after meaningful sections or decision points

☐ 7.3 Ask for only necessary information

Limit forms to information that is useful for the immediate next step or a clearly justified follow-up process

AUDIT

Are visitors asked for unnecessary information?

BUILD

Remove, postpone, or make optional fields that are not essential

☐ 7.4 **Use clear labels, validations and feedback**

Help visitors understand what each field requires and recover from mistakes

AUDIT Are field labels ambiguous, or are errors discovered only after submission?

BUILD Use clear labels, inline validation, helpful error messages, and clear success states

☐ 7.5 **Set expectations before commitment**

Include relevant information about the action, including timing, cost, follow-up, or the process involved

AUDIT Could visitors feel surprised by what happens after clicking the CTA?

BUILD Set appropriate expectations before the visitor commits

☐ 7.6 **Protect the conversion path**

Prevent unnecessary distractions or technical issues from interfering with high-intent tasks

AUDIT Are pop-ups, confusing navigation, broken links, or unexpected interruptions disrupting important actions?

BUILD Remove or manage distractions that do not support the visitor's current task

☐ 7.7 **Respect privacy and consent**

Communicate relevant data practices

AUDIT Is it clear what information is being collected and how it will be used?

BUILD Implement appropriate privacy disclosures, consent mechanisms, and secure data handling based on business and applicable requirements

08

PHASE 8 · 6 ITEMS

Lead Capture & Nurture

☐ 8.1 Create a meaningful value exchange

Give visitors a strong reason to share their contact information

AUDIT

Does the lead magnet offer meaningful value relative to the information requested?

BUILD

Create a resource that directly relates to the visitor's problem and demonstrates your expertise

☐ 8.2 Deliver the promised asset immediately

Available through reliable and clear delivery process

AUDIT

Does the visitor know how to access the checklist, guide, or other resource?

BUILD

Configure confirmation and delivery emails, download access, and appropriate fallback instructions

☐ 8.3 Capture the right context

Collect info that helps you provide more relevant follow-up without unnecessarily increasing form friction

AUDIT

Is the business missing important context, or collecting useless info

BUILD

Request useful details such as business type, website URL, or project needs when justified

☐ 8.4 **Use a coherent nurture sequence**

Create a series of messages that builds on the visitor's initial interest

AUDIT

Are emails random, repetitive, or focused only on selling?

BUILD

Organize emails around education, common problems, objections, proof, process and appropriate next steps

☐ 8.5 **Use personalized follow-up**

Personalize when it genuinely enhances visitor experience

AUDIT

Could a personalized review or explanation add meaningful value?

BUILD

Consider individualized loom videos, website observations, or relevant recommendations where the effort is sustainable

☐ 8.6 **Prevent lost or mishandled leads**

Ensure failures can be detected

AUDIT

Are forms, emails, CRM records, and notifications working reliably?

BUILD

Implement appropriate routing, error handling, logging, and notifications for important lead workflows

09

PHASE 9 · 6 ITEMS

Technical Foundation

☐ 9.1 **Verify performance**

Measure website load speed and technicals

AUDIT

Are there loading delays, responsiveness issues, or layout shifts?

BUILD

Measure performance and address significant bottlenecks based on evidence and relevant user needs

☐ 9.2 **Test every conversion path**

Test start to finish important actions

AUDIT

Have forms, bookings, payments, downloads, and emails been tested in realistic conditions?

BUILD

Perform end-to-end tests before launch and after meaningful changes

☐ 9.3 **Test relevant devices and browsers**

AUDIT

Has the website only been tested on one computer or browser?

BUILD

Test desktop and mobile devices, browsers, screen sizes, and relevant interaction methods

☐ 9.4 Implement basic search health

SEO

AUDIT

Are titles, crawlability, indexing, and important SEO fundamentals been addressed?

BUILD

Implement relevant on-page SEO, appropriate metadata, crawlable content, and search monitoring

☐ 9.5 Handle errors and edge cases

Design for network failures, invalid submissions, or service interruptions

AUDIT

Do users receive useful feedback when an action fails?

BUILD

Implement loading, error, retry, and fallback states for important functionality

☐ 9.6 Maintain the site

Treat the site as an ongoing system

AUDIT

Is there an owner for content updates, forms, dependencies, analytics, and maintenance?

BUILD

Establish a maintenance process and clarify responsibilities for keeping the website operational

10

PHASE 10 · 8 ITEMS

Measurement & Optimization

☐ 10.1 Track the primary conversion

Measure if visitors are completing the most important action

AUDIT

Is there a reliable way to measure if the primary conversion occurred

BUILD

Implement relevant conversion event and tracking process

☐ 10.2 Track meaningful funnel steps

Measure important stages of conversion process to see where visitors might be dropping off

AUDIT

Can you see where users abandon a meaningful task?

BUILD

Track relevant steps such as CTA clicks, form starts, submissions, bookings, or purchases

☐ 10.3 Use qualitative behavior data carefully

Use observations from usability tests, visitor feedback, recordings, or other qualitative sources to develop hypotheses

AUDIT

Are design decisions based on opinions or aggregate metrics

BUILD

Gather qualitative evidence where appropriate and use it to investigate potential friction

☐ 10.4 **Document observations and hypotheses**

Keep a record of what you observed, your hypothesis on what is happening and what you changed

AUDIT Are website changes made without a clear reason or expected outcome?

BUILD Document the observation, hypothesis, proposed change, expected effect, and results

☐ 10.5 **Prioritize likely impact**

Focus effort on problems that will have the most meaningful impact on customer experience or business outcome first

AUDIT Is the team spending disproportionate time on minor visuals instead of major issues

BUILD Prioritize based on potential impact, confidence in the evidence, and implementation effort

☐ 10.6 **Experiment when volume justifies it**

Use controlled experiments when website traffic is there and meaningful hypotheses exist

AUDIT Are experiments being run without adequate data or a clear question?

BUILD Use A/B testing where feasible. When traffic is limited, consider usability testing, qualitative feedback, and careful before-and-after measurement

☐ 10.7 **Avoid false certainty**

Understand that metrics and individual observations have limitations

AUDIT Are sweeping conclusions being drawn from one metric or small sample

BUILD Consider context, sample size, segmentation, tracking quality, and other explanations before deciding what the result means

☐ 10.8 **Feed learning back into the system**

Use real projects to improve checklist, processes, and design decisions

AUDIT

Is the checklist treated as fixed despite contradictory evidence or new learning?

BUILD

Update principles, examples, priorities, and industry-specific guidance as you gain experience
